Good
breathability

Color fastness
and frictional resistance

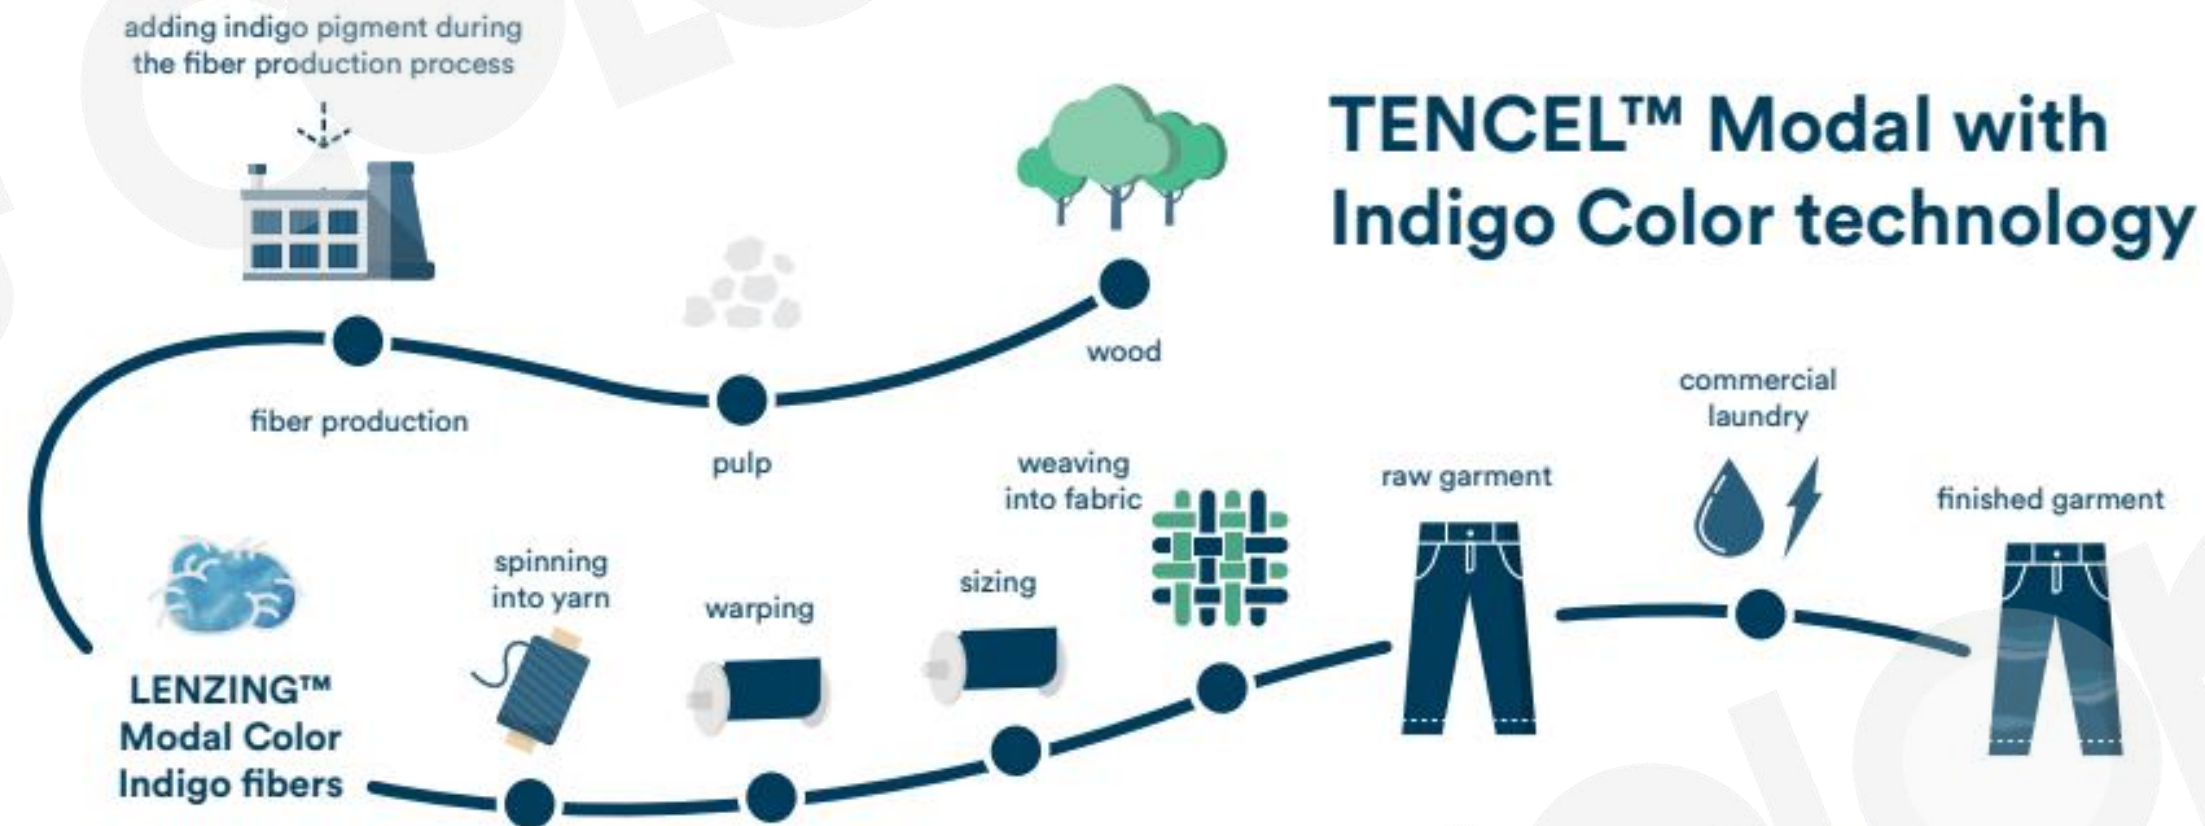

- FUTURE INDIGO use modal fibre,It is a kind of high wet cellulose regenerate fibre produced by Lenzing Company located in Austria.
- It' s production process has no pollution,we also called that green fibre.It is stretchy and can blend with wool 、 cashmere 、 cotton 、 flax 、 silk 、 dacron amd so on to make the yarn better
- Modal fibre has cotton soft,silky luster,hemp of soomth,and the water absorption,permeability were superior to cotton.
- It si suitable for the light-weight fabric cause of the high strength(with high intensity 、 soft handle 、 good drapability and processability)and thick without weight fabric.

Indigo Color Technology

- FUTURE INDIGO make use of primary color dyeing technology to blend indigo dye in Tencel modal fibre. This new production can simplify the process of indigo dyeing and bring multiple environmental benefits.

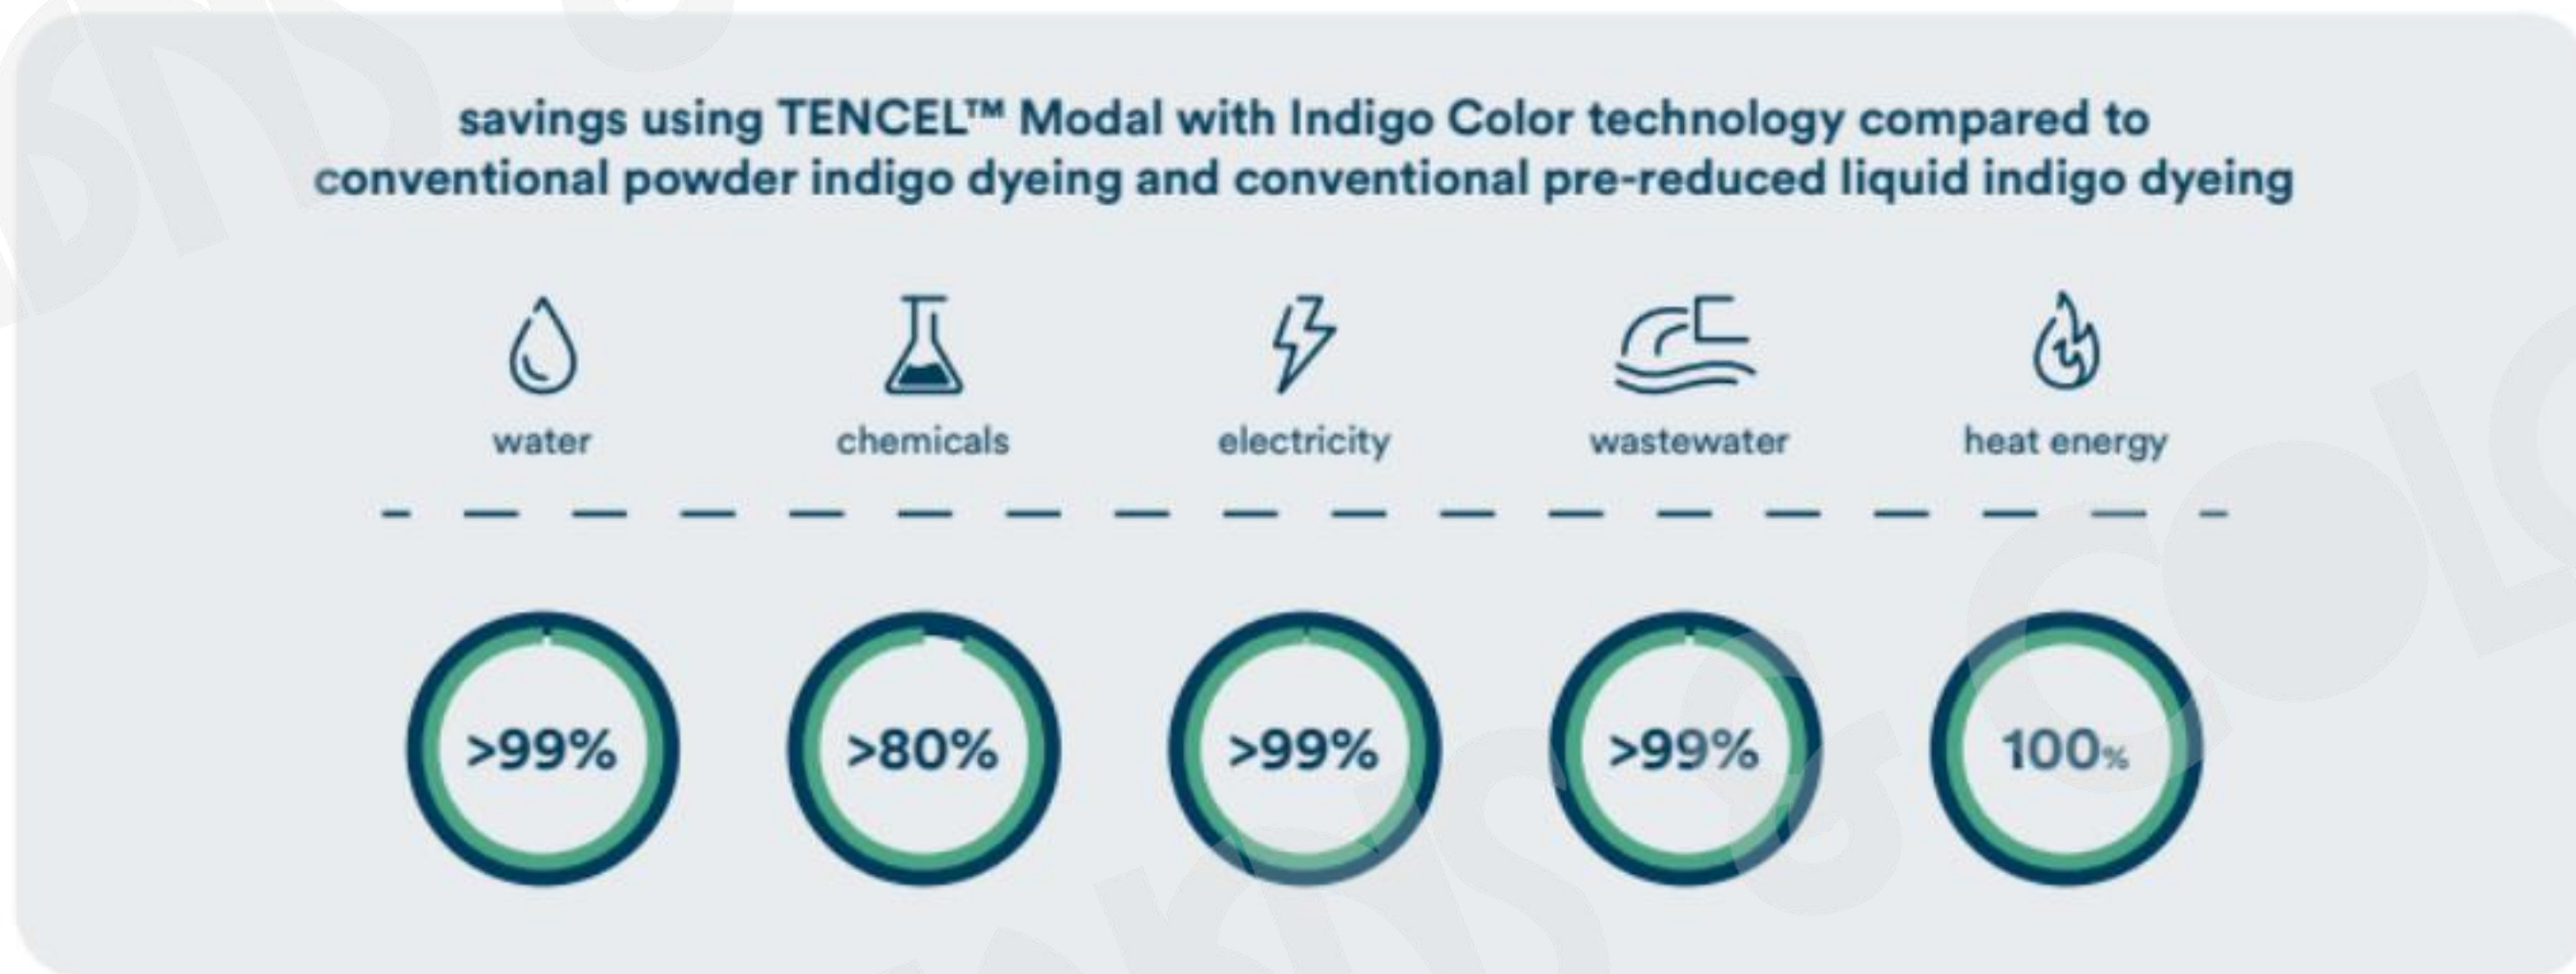

- This technology has an advantage over the traditional dye just like the right picture.

Save Resources

FUTURE INDIGO Compare with the traditional dyeing, the TENCEL Modal fibre which used indigo color technology has lower carbon footprints. Not only save the water, the chemicals and the energy, also produce less wastes. According to the specific process parameters, the resource savings will be different. For reference, the following is test by Lenzing provides the resource saving benefits.

In general, the higher the percentage of TENCEL Modal with Indigo Color technology used in the fabric, the greater the potential savings. Lenzing's results are based on tests using 100% LENZING™ Modal Color Indigo fibers. Customers are recommended to perform their own calculations based on their individual variables and are responsible for the accuracy of the results.

Protect baby's future with indigo modal

INDIGO MODAL

Natural, soft and silky, healthy skin, care for delicate skin with peace of mind.

INDIGO COLOR

Fiber stock solution coloring, safe dye, not easy to fade, baby can also wear.

SEASON LESS

Warm in winter and cool in summer, rich product versions, suitable for all seasons.

FUTURE INDIGO Series products

CF0744

Elastic

2/50NM;50%Modal 22%Wool
28%PBT;

Unique and soft quality, smooth touching sense, get rid of excess moisture to keep skin dry and comfortable.with good elasticity,it is freely retractable.appearance vogue and retro.

CF0745

Warm

2/36NM;58%Modal 26%Wool
16%PBT;

Unique and soft quality, smooth touching sense, get rid of excess moisture to keep skin dry and comfortable.with good elasticity,it is freely retractable.appearance vogue and retro.

CF0746

Fall and winter

2/48NM;70%Modal
30%Wool;

The fabric is warm and comfortable,energy saving and environmental,also rich color.

CS2828

Standard

2/50NM;72%Modal 28%PBT;

It has cotton soft,silky luster,hemp of soomth,and the water absorption,permeability were superior to cotton. with good elasticity,it is freely retractable.

CS2841

Environmental

2/50NM;100%Modal;

The production process is extremely environmental,and it can naturally degrade. The luster、softness、hygroscopicity and dyeability of the fabric are superior to the pure cotton products, it is soft with an excellent sense of pendant and wears long.

INDRA/FY7601 Luxury Version

1/20NM

70%IndigoModal 14%Polyamide

9%Polyester 7%Metallisde Fibre

Features:

- Soft and delicate touch;
- With starry onion slices;
- Elegant texture, low-key luxury.
